**market**

DMP knows you cannot risk time and money waiting to see if an experimental design will work – or worse, to find out it can never work. You need proven design flexibility with reliable standardized products: design flexibility to allow efficient customizing for your individual needs; product standardization so you can get fast delivery and predictable performance.

DMP's Module Series systems offer it all – and more. Our Module Series systems are based on standardized modular designs – a “building-block”

approach which enables us to deliver systems quickly and still customize each system to meet the individual customer needs for discharge, plant floor space, and treatment requirements for the individual project. With the Module Series, DMP delivers working systems faster than any other company.

We understand your problems and are prepared to deal with them today. We can outfit you with a system especially made for your unique situation – a whole system, usually in less time than it would take you to acquire a one-off design from someone else.

## Quick, efficient solutions for Industrial Water Treatment

*DMP Module 2000*

## Full Range of DMP Systems Available

The DMP Module Series of industrial water treatment systems was developed for a broad range of flow rates – from smaller rates of 5 to 200 gallons per minute (Module 500 to Module 20,000) to larger flow rates in any range.

All DMP Module Series treatment systems are fully automatic, continuous flow systems. Typical of the Module Series, the Module 2000, shown on the lower left, is comprised of one ORP reactor one pH recorder, a chemical feed system, a concentrate handling system, a flocculator, a clarifier, a filter press, a deck, and a control center.

Requiring only 16 x 20 feet of floor space, Module 2000 handles a flow rate of 20 gpm and produces a non-pourable filter cake leaving clear effluent which meets Federal guidelines for discharge to publicly owned treatment works (POTW).

The fully automatic DMP Module 6000, offers the same components and performance as the Module 2000, except it handles up to 60 gpm and requires only 15 x 28 feet of floor space. Module 1500, handles 15 gpm and requires only 8 x 15 feet of floor space.

## Call Us Toll Free Today

The experts at DMP understand your waste treatment problems, your deadlines, needs and requirements, and the way they seem to change so rapidly. We are ready to build a system just for you; no problem is too large or too small, no solution is too simple or too complex. If you're operating in Canada, Mexico or abroad, you'll be glad to know that DMP is experienced in international export work. We can solve your industrial water treatment problems any where! If you're a wastewater veteran, the DMP team has the experience to answer questions, provide information, and supply all you need to successfully complete a wastewater treatment project. If you're launching your first project, the DMP team will help you learn how to buy a wastewater treatment system. You don't even have to know the first question to ask. All you have to do is dial our toll-free telephone number: 800-845-3681.

Today, buyers who want fast turn-around on proven, working systems – backed by professional service – have one choice:

DMP Corporation.

The best choice.

## Solutions for Today and Tomorrow

All Module Series equipment is designed to adapt easily to most existing facilities, and because our modular concept offers flexibility our equipment can also be altered to keep pace with changes. When your needs change, when your company grows or when EPA requirements tighten, DMP equipment can adapt. Add-on, plug-in capabilities are built into every DMP system. You can add DMP components to your existing DMP system or take parts of your DMP system and plug them into a newer, larger DMP system.

DMP's modular designs also enable us to minimize your future costs by providing systems that grow, like building blocks, to fit your needs tomorrow. That means DMP systems never grow obsolete – a time and money saving feature you can't ignore.

Above all, DMP systems work. We guarantee that the Module Series system you buy will meet your compliance needs. Guaranteed, 24 hours a day, every day. After all, that is the whole point; to comply with the law in the most efficient way possible.
