INDUSTRIAL WATER TREATMENT

DMP Modular Series...

DMP is widely known as the leading manufacturer of industrial wastewater treatment systems, but you may not know that DMP was an industry pioneer, and is today a leader, in clean water and recycle water technologies.

If you are looking for a supplier of Total Water Production Equipment—equipment to process clean water, equipment to treat wastewater and equipment to process and recycle treated water—consider DMP and our three decades plus of experience

Times are changing

If you are like most manufacturers, in years in the past you discovered that talking about water recycle/reuse was a lot cheaper than actually doing it. The availability of new water at very inexpensive prices kept the demand for recycle/reuse technology low— and thus the price of complicated recycle equipment high, usually unjustifiably high.

DMP's approach during those years was to help customers understand this and to see that, for most customers, resources might be better

spent using water more efficiently once, then treating that water efficiently and discharging it. For customers with high water costs or poor availability, DMP supplied state-of-the-art recycle/reuse equipment, and all the while, we continued to develop and keep abreast of the latest technologies.

Today, the situation is changing. Water costs are rising while automation is bringing down the overall cost of owning sophisticated equipment. It now makes more and more sense for you to investigate clean water and recycle water solutions.

Clean Water and Recycle Water Solutions

Leading once again....

The project that launched DMP over 30 years ago was, at that time, the largest Reverse Osmosis system ever built. DMP was also the first to supply resin-based decationizer systems to the PC board industry.

Today, DMP continues to stay ahead of the technology curve. We're combining state-of-the-art clean water and recycle water equipment with our advanced wastewater treatment equipment to offer the industry's most advanced Total Water Production package.

Whether your needs range from simple filtering of incoming river water to softening of well/reservoir water to a full reverse osmosis and de-ionizer system, DMP can fill your needs in a way no other company can-- because DMP can integrate it all under a single control system.

Plus, DMP's sophisticated Control Centers offer remote control and monitoring capabilities, as well as DMP TECH LINK™, DMP's exclusive system that allows DMP support technicians to "diagnose" problems remotely.

Call Us Toll Free Today

The experts at DMP understand your waste treatment problems, your deadlines, needs and requirements, and the way they seem to change so rapidly. We are ready to build a system just for you; no problem is too large or too small, no solution is too simple or too complex. If you're operating in Canada, Mexico or abroad, you'll be glad to know that DMP is experienced in international export work. We can solve your industrial water treatment problems anywhere!

If you're a wastewater veteran, the DMP team has the experience to answer questions, provide information, and supply all you need to successfully complete a wastewater treatment project. If you're launching your first project, the DMP team will help you learn how to buy a wastewater treatment system. You don't even have to know the first question to ask. All you have to do is dial our toll-free telephone number: 800-845-3681.

Today, buyers who want fast turn-around on proven, working systems – backed by professional service – have one choice:

DMP Corporation.

The best choice.

Find Out

Whether you are planning a new facility or looking to improve efficiency at an existing plant, it makes sense today to "run the numbers" on clean water and recycle water equipment.

DMP will help you do it.

We will review your plans and promptly submit a proposal including costs. Like all DMP proposals, your Total Water Production proposal will include a guarantee of performance, just as you expect from the one company that has the knowledge and experience to meet all of your water treatment needs.

Find out what clean water and recycle water equipment can do for you. Call, fax or e-mail us today.
